

AUTOMOTIVE MARKET
BRAKE DISCS

TORQ BYGREEN presents its line of replacement parts made to dominate speed: Automotive brake discs and drums, created with high technology and amazing performance. They have reliability, quality, cutting-edge technology and sustainability.

Reliability is ensured in the complete mastery of the strict requirements demanded in the production of automotive parts, attested by the experience of those who already supply the Tier 1 (OEM) market.

Quality is forged in the most modern foundry in the country, fully inserted in industry 4.0, which enables digital controls throughout the process, resulting in high standard castings.

Technology shapes our entire product, in state-of-the-art digital designs for each part, in control labs that attest to the most rigorous specifications, and in the best computerized equipment for machining castings, resulting in greater durability and safety.

Sustainability is in everything! **TORQ BYGREEN** attests and certifies its entire production chain, achieving a positive balance of carbon sequestration, capturing CO₂ from the atmosphere at much higher levels than the market, aligning our product with the green economy.

We are paving our way to an environmentally friendly and sustainable future. Thus, we control our time.

The diagram shows a cross-section of the wheel hub. Dimension A is the outer diameter of the hub. Dimension B is the overall height from the bottom surface to the top of the hub. Dimension C is the center hole diameter. Dimension E is the number of bolt holes, indicated by a horizontal line with a length of 5. Dimension TH is the thickness of the hub body, and dimension TH(min.) indicates the minimum required thickness.

The technical drawing shows a cross-section of the disc brake rotor. Dimension A is the outer diameter, B is the overall height, C is the center hole diameter, E is the number of bolt holes, and TH and TH(min.) represent the thickness at the top and minimum thickness respectively. The diagram illustrates the multi-layer construction of the rotor.
